Part I Symmetry Groups and Algebras

page

1	Introduction	1
2	Some Properties of Groups	3
2.1	Invariance and Conservation Laws	3
2.2	Definition of a Group	4
2.3	Examples of Groups	5
2.3.1	Additive Group of Integers	5
2.3.2	Rotation and Translation Groups	5
2.3.3	Parameterization of Continuous Groups	8
2.3.4	Permutation Groups	8
2.4	Subgroups	10
2.5	Homomorphism and Isomorphism	11
2.6	Matrix Representations	14
2.6.1	A Matrix Representation of S_3	14
2.6.2	Dimensionality of Matrix Representations	15
2.6.3	Linear Operators and Matrix Representations	15
2.7	Reducible and Irreducible Representations	16
2.8	Degenerate Multiplet Structure	16
2.9	Some Examples of Matrix Groups	18
2.9.1	General Linear Groups	18
2.9.2	Unitary Groups	19
2.9.3	Orthogonal Groups	19
2.9.4	Symplectic Groups	19
2.10	Group Generators	20
2.11	Conjugate Classes	21
2.12	Invariant Subgroups	22
2.13	Simple and Semisimple Groups	24
2.14	Cosets and Factor Groups	24
2.14.1	Left and Right Coset Decompositions	24
2.14.2	Factor Groups	26
2.15	Direct-Product Groups	27
2.16	Direct Product of Representations	28

2.17	Characters of Representations	30
2.17.1	Character Theorems	30
2.17.2	Character Tables	32
	Problems	35
3	Introduction to Lie Groups	39
3.1	Lie Groups	39
3.2	Lie Algebras	41
3.2.1	Invariant Subalgebras	43
3.2.2	Adjoint Representation of the Algebra	43
3.3	Angular Momentum and the Group $SU(2)$	44
3.3.1	Fundamental Representation of $SU(2)$	44
3.3.2	The Cartan–Dynkin Method	46
3.3.3	Cartan–Dynkin Analysis of $SU(2)$	47
3.3.4	The Clebsch–Gordan Series for $SU(2)$	49
3.3.5	$SU(2)$ Adjoint Representation	52
3.4	Isospin	52
3.4.1	The Neutron–Proton System	53
3.4.2	Algebraic Structure for Isospin	53
3.4.3	The $U(1)$ and $SU(2)$ Subgroups of $U(2)$	54
3.4.4	Analogy between Angular Momentum and Isospin	55
3.4.5	The Adjoint Representation of Isospin	57
3.5	The Importance of Lie Groups in Physics	58
3.6	Symmetry and Dynamics	58
3.6.1	Local Gauge Theories	59
3.6.2	Dynamical Symmetries	59
	Problems	61
4	Permutation Groups	65
4.1	Young Diagrams	65
4.1.1	Two-Particle Young Diagrams	66
4.1.2	Many-Particle Young Diagrams	66
4.1.3	A Compact Notation	66
4.2	Standard Arrangements of Young Tableaux	67
4.3	Irreducible Representations	68
4.3.1	Counting Standard Arrangements	68
4.3.2	The Hook Rule	69
4.4	Basis Vectors	69
4.5	Products of Representations	70
4.5.1	Direct Products	71
4.5.2	Outer Products	72
	Problems	74
5	Electrons on Periodic Lattices	75

5.1	The Direct Lattice	75
5.1.1	Breavais Lattices	75
5.1.2	Wigner–Seitz Cells	76
5.2	The Reciprocal Lattice	76
5.3	Brillouin Zones	77
5.4	Bloch’s Theorem	79
5.5	Electronic Band Structure	80
5.6	Point Groups	81
5.6.1	Point Group Operations	83
5.6.2	The Crystallographic Point Groups	83
5.7	Example: the Ammonia Molecule	84
5.7.1	Symmetry Operations	85
5.7.2	A Matrix Representation	86
5.7.3	Class Structure	90
5.7.4	Other Irreducible Representations	91
5.8	General Lattice Symmetry Classifications	93
5.9	Space Groups	93
5.9.1	Elements of the Space Group	93
5.9.2	Symmorphic Space Groups	93
	Problems	95
6	The Rotation Group	98
6.1	Three-Dimensional Rotations	98
6.2	The $SO(2)$ Group	99
6.2.1	Generators of $SO(2)$ Rotations	99
6.2.2	$SO(2)$ Irreducible Representations	100
6.2.3	Connectedness of the Manifold	102
6.2.4	Compactness of the Manifold	103
6.2.5	Invariant Group Integration	104
6.3	The $SO(3)$ Group	106
6.3.1	Generators of $SO(3)$	106
6.3.2	Matrix Elements of the Rotation Operator	107
6.3.3	Properties of D -Matrices	108
6.3.4	Characters for $SO(3)$	109
6.3.5	Direct Products of $SO(3)$ Representations	110
6.3.6	$SO(3)$ Vector-Coupling Coefficients	110
6.3.7	Properties of $SO(3)$ Clebsch–Gordan Coefficients	111
6.3.8	$3J$ Symbols	112
6.3.9	Construction of $SO(3)$ Irreducible Multiplets	112
6.4	Tensor Operators under Group Transformations	114
6.5	Tensors for the Rotation Group	115
6.6	$SO(3)$ Tensor Products	116
6.7	The Wigner–Eckart Theorem	117
6.8	The Wigner–Eckart Theorem for $SO(3)$	118

6.8.1	Reduced Matrix Elements	118
6.8.2	Selection Rules	119
6.9	Relationship of $SO(3)$ and $SU(2)$	120
6.9.1	$SO(3)$ and $SU(2)$ Group Manifolds	120
6.9.2	Universal Covering Group of the $SU(2)$ Algebra	121
	Problems	123
7	Classification of Lie Algebras	127
7.1	Adjoint Representations	127
7.1.1	The Cartan Subalgebra	127
7.1.2	Raising and Lowering Operators	128
7.2	The Cartan–Weyl Basis	130
7.2.1	Semisimple Algebras	130
7.2.2	Metric Tensor, Semisimplicity, and Compactness	130
7.3	Structure of the Root Space	131
7.3.1	Root Space Restrictions	131
7.3.2	Lengths and Angles for Root Vectors	132
7.4	Construction of Root Diagrams	133
7.4.1	Rank-1 and Rank-2 Compact Lie Algebras	134
7.4.2	An Ordering Prescription for Weights	136
7.5	Simple Roots	137
7.6	Dynkin Diagrams	139
7.6.1	The Cartan Matrix	140
7.6.2	Constructing All Roots from Dynkin Diagrams	140
7.6.3	Constructing the Algebra from the Roots	140
7.7	Dynkin Diagrams and the Simple Algebras	142
	Problems	144
8	Unitary and Special Unitary Groups	145
8.1	Generators and Commutators for $SU(3)$	145
8.2	$SU(3)$ Casimir Operators	146
8.3	$SU(3)$ Weight Space	147
8.3.1	$SU(3)$ Raising and Lowering Operators	147
8.3.2	$SU(3)$ Irreducible Representations	147
8.3.3	Dimensionality of $SU(3)$ Irreps	148
8.3.4	Construction of $SU(3)$ Weight Diagrams	150
8.4	Complex Conjugate Representations	151
8.5	Real and Complex Representations	151
8.6	Unitary Symmetry and Young Diagrams	152
8.7	Young Diagrams for $SU(N)$	153
8.7.1	Two Particles in Two States	155
8.7.2	Two Particles in Three States	156
8.7.3	Fundamental and Conjugate Representations	156
8.8	Dimensionality of $SU(N)$ Representations	157

8.9	Direct Products of $SU(N)$ Representations	158
8.10	Weights from Young Diagrams	159
8.11	Graphical Construction of Direct Products	160
	Problems	162
9	$SU(3)$ Flavor Symmetry	164
9.1	Symmetry in Particle Physics	164
9.1.1	$SU(3)$ Phenomenology and Quarks	164
9.1.2	Non-Abelian Gauge Symmetries	165
9.2	Fundamental $SU(3)$ Quark Representations	165
9.3	$SU(3)$ Flavor Multiplets	166
9.3.1	Mass Splittings in $SU(3)$ Multiplets	166
9.3.2	Quark Structure for Mesons and Baryons	168
9.4	Isospin Subgroups of $SU(3)$	168
9.4.1	Subgroup Analysis Using Weight Diagrams	170
9.4.2	Subgroup Analysis Using Young Diagrams	171
9.5	Extensions of Flavor $SU(3)$ Symmetry	173
9.5.1	Higher-Rank Flavor Symmetries	173
9.5.2	$SU(6)$ Flavor–Spin Symmetry	174
9.5.3	Baryons and Mesons under $SU(6)$ Symmetry	174
	Problems	176
10	Harmonic Oscillators and $SU(3)$	178
10.1	The 3D Quantum Oscillator	178
10.1.1	Eigenvalues	178
10.1.2	Wavefunctions	179
10.1.3	Unitary Symmetry	179
10.1.4	Angular Momentum Subgroup	180
10.1.5	$SO(3)$ Transformation Properties	181
10.1.6	Group Structure	182
10.1.7	Many-Body Operators	182
10.2	$SU(3)$ and the Nuclear Shell Model	183
10.3	$SU(3)$ Classification of SD-Shell States	183
10.3.1	Classification Strategy	184
10.3.2	Orbital and Spin–Isospin Symmetry	185
10.3.3	Permutation Symmetry	186
10.3.4	Example: Two Particles in the SD Shell	187
10.4	$SU(2)$ Subgroups and Intrinsic States	189
10.4.1	Weight Space Operators and Diagrams	190
10.4.2	Angular Momentum Content of Multiplets	191
10.5	Collective Motion in the Nuclear SD Shell	192
10.5.1	Hamiltonian	192
10.5.2	Group-Theoretical Solution	193
10.5.3	The Theoretical Spectrum	193

Problems	195
11 SU(3) Matrix Elements	196
11.1 Clebsch–Gordan Coefficients for SU(3)	196
11.2 Constructing SU(3) Clebsch–Gordan Coefficients	197
11.3 Matrix Elements of Generators	200
11.4 Isoscalar Factors	200
11.4.1 Racah Factorization Lemma	202
11.4.2 Evaluating and Using Isoscalar Factors	202
11.5 $SU(3) \supset SO(3)$ Tensor Operators	202
11.6 The SU(3) Wigner–Eckart Theorem	203
11.7 Structure of SU(3) Matrix Elements	204
11.8 The Gell–Mann, Okubo Mass Formula	206
11.9 SU(3) Oscillator Reduced Matrix Elements	207
11.9.1 Spherical Operators	207
11.9.2 Matrix Elements for Creation and Annihilation Operators	208
11.9.3 Electromagnetic Transitions in the SD Shell	209
11.10 Lie Algebras and Many-Body Systems	211
Problems	212
12 Introduction to Non-Compact Groups	214
12.1 Review of the Compact Group $SU(n)$	214
12.2 The Non-Compact Group $SU(l, m)$	215
12.2.1 Signature of the Metric	215
12.2.2 Parameter Space for $SU(1, 1)$	216
12.3 The Non-Compact Group $SO(l, m)$	216
12.4 Euclidean Groups	217
12.4.1 The Euclidean Group E_3 for 3D Space	217
12.4.2 The Euclidean Group E_2 for 2D Space	217
12.4.3 Semidirect Product Groups	219
12.4.4 Algebraic Properties of E_2	219
12.4.5 Invariant Subgroup of Translations	220
12.5 Method of Induced Representations for E_2	221
12.5.1 Generating the Representation	221
12.5.2 Significance of the Abelian Invariant Subgroup	223
Problems	224
13 The Lorentz Group	225
13.1 Spacetime Tensors	225
13.1.1 A Covariant Notation	225
13.1.2 Tensor Transformation Laws	227
13.2 Lorentz Transformations	228
13.2.1 Lorentz Boosts as Minkowski Rotations	229
13.2.2 Generators of Boosts and Rotations	230

13.2.3	Commutation Algebra for the Lorentz Group	231
13.3	Classification of Lorentz Transformations	231
13.3.1	The Four Pieces of the Full Lorentz Group	232
13.3.2	Improper Lorentz Transformations	233
13.3.3	Lightcone Classification of Minkowski Vectors	233
13.4	Properties of the Lorentz Group	234
13.5	The Lorentz Group and $SL(2, \mathbb{C})$	235
13.5.1	A Mapping between 4-Vectors and Matrices	235
13.5.2	The Universal Covering Group of $SO(3,1)$	236
13.6	Spinors and Lorentz Transformations	236
13.6.1	$SU(2) \times SU(2)$ Representations of the Lorentz Group	237
13.6.2	Two Inequivalent Spinor Representations	237
13.7	Space Inversion for the Lorentz Group	238
13.7.1	Action of Parity on Generators and Representations	238
13.7.2	General and Self-Conjugate Representations	240
13.8	Parity and 4-Spinors	241
13.9	Higher-Dimensional Lorentz Representations	242
13.10	Non-Unitarity of Representations	243
13.11	Meaning of Non-Unitary Representations	243
	Problems	245
14	Lorentz-Covariant Fields	246
14.1	Lorentz Covariance of Maxwell's Equations	246
14.1.1	Scalar and Vector Potentials	247
14.1.2	Gauge Transformations	247
14.1.3	Manifestly Covariant Form of the Maxwell Equations	248
14.2	The Dirac Equation	249
14.2.1	Lorentz-Boosted Spinors	250
14.2.2	A Lorentz-Covariant Notation	250
14.3	Dirac Bilinear Covariants	251
14.3.1	Covariance of the Dirac Equation	252
14.3.2	Transformation Properties of Bilinear Products	253
14.4	Weyl Equations and Massless Fermions	254
14.5	Chiral Invariance	256
14.5.1	Helicity States for Fermions	256
14.5.2	Dirac Equation in Pauli-Dirac Representation	257
14.5.3	Helicity and Chirality for Dirac Fermions	258
14.5.4	Projection Operators for Chiral Fermions	258
14.5.5	Interactions and Chiral Symmetry	260
14.6	The Majorana Equation	260
14.6.1	Dirac and Majorana Masses	261
14.6.2	Neutrinoless Double β -Decay	262
14.7	Summary: Possible Spinor Types	263
14.8	Spinor Symmetry in the Weak Interactions	265

14.8.1	The Left Hand of the Neutrino	265
14.8.2	Violation of Parity P	265
14.8.3	C, CP, and T Symmetries	266
14.8.4	A More Complete Picture	266
	Problems	268
15	Poincaré Invariance	270
15.1	The Poincaré Multiplication Rule	270
15.2	Generators of Poincaré Transformations	271
15.2.1	Proper Lorentz Transformations	271
15.2.2	Four-Dimensional Spacetime Translations	272
15.2.3	Commutators for Poincaré Generators	272
15.3	Representation Theory of the Poincaré Group	272
15.3.1	Casimir Operators for the Poincaré Group	272
15.3.2	Classification of Poincaré States	274
15.3.3	Method of Induced Representations	275
15.4	Massive Representations of the Poincaré Group	275
15.4.1	Quantum Numbers for Massive States	276
15.4.2	Action of the Poincaré Group on Massive States	276
15.4.3	Summary: Representations for Massive States	277
15.5	Massless Representations	278
15.5.1	The Standard Lightlike Vector	278
15.5.2	Lie Algebra of the Little Group	278
15.5.3	Quantum Numbers for Massless States	279
15.6	Mass and Spin for Poincaré Representations	279
15.7	Lorentz and Poincaré Representations	280
15.7.1	Operators for Relativistic Quantum Fields	281
15.7.2	Wave Equations for Quantum Fields	281
15.7.3	Plane-Wave Expansion of the Fields	282
15.7.4	The Relationship of Fields and Particles	283
15.7.5	Symmetry and the Wave Equation	283
	Problems	285
16	Gauge Invariance	286
16.1	Relativistic Quantum Field Theory	286
16.1.1	Quantization of Classical Fields	286
16.1.2	Symmetries of the Classical Action	287
16.1.3	Lagrangian Densities for Free Fields	287
16.1.4	Euler–Lagrange Field Equations	289
16.2	Conserved Currents and Charges	289
16.2.1	Noether’s Theorem	290
16.2.2	Conserved Charges	291
16.2.3	Symmetries for Interacting Fields	291
16.2.4	Partially Conserved Currents	292

16.3	Gauge Invariance in Quantum Mechanics	293
16.4	Gauge Invariance and the Photon Mass	294
16.5	Quantum Electrodynamics	295
16.5.1	Global U(1) Gauge Invariance	295
16.5.2	Local U(1) Gauge Invariance	295
16.5.3	Gauging the U(1) Symmetry	296
16.6	Yang–Mills Fields	297
16.6.1	Non-Abelian Gauge Invariance	297
16.6.2	Covariant Derivatives	297
16.6.3	Non-Abelian Generalization of QED	299
16.6.4	Properties of Non-Abelian Gauge Fields	299
	Problems	302
Part II Broken Symmetry		305
17	Spontaneous Symmetry Breaking	307
17.1	Modes of Symmetry Breaking	307
17.2	Explicit Symmetry Breaking	307
17.3	The Vacuum and Hidden Symmetry	308
17.4	Spontaneously Broken Discrete Symmetry	309
17.4.1	Symmetry in the Wigner Mode	309
17.4.2	Spontaneously Broken Symmetry	310
17.4.3	Summary of Spontaneously Broken Discrete Symmetry	311
17.5	Spontaneously Broken Continuous Symmetry	311
17.5.1	Symmetric Classical Vacuum	312
17.5.2	Hidden Continuous Symmetry	312
17.5.3	The Goldstone Theorem	313
17.5.4	The Stability Subgroup	315
	Problems	317
18	The Higgs Mechanism	318
18.1	Photons and the Higgs Loophole	318
18.2	The Abelian Higgs Model	319
18.2.1	Lagrangian Density	319
18.2.2	Symmetry Breaking	320
18.2.3	Understanding the Higgs Mechanism	321
18.3	Vacuum Screening Currents	322
18.3.1	Gauge Invariance and Mass	322
18.3.2	Screening Currents and Effective Mass	323
18.3.3	Atomic Screening Currents	324
18.3.4	The Meissner Effect and Massive Photons	325
18.3.5	Gauge Invariance and Longitudinal Polarization	327
18.4	The Higgs Boson	328

Problems	330
19 The Standard Model	331
19.1 The Standard Electroweak Model	331
19.1.1 Guidance from Data	331
19.1.2 The Gauge Group	333
19.1.3 Electroweak Lagrangian Density	334
19.1.4 The Electroweak Higgs Mechanism	336
19.1.5 Particle Spectrum	337
19.2 Quantum Chromodynamics	339
19.2.1 A Color Gauge Theory	339
19.2.2 The QCD Lagrangian Density	340
19.2.3 Symmetries of the QCD Lagrangian Density	341
19.2.4 Asymptotic Freedom and Confinement	342
19.2.5 Exotic Hadrons and Glueballs	343
19.3 The Gauge Theory of Fundamental Interactions	345
Problems	347
20 Dynamical Symmetry	348
20.1 The Microscopic Dynamical Symmetry Method	348
20.1.1 Solution Algorithm	349
20.1.2 Validity and Utility of the Approach	350
20.1.3 Spontaneously Broken and Dynamical Symmetry	351
20.1.4 Kinematics and Dynamics	351
20.2 Monolayer Graphene in a Strong Magnetic Field	351
20.2.1 Electronic Dispersion in Monolayer Graphene	352
20.2.2 Landau Levels for Massless Dirac Electrons	353
20.2.3 $SU(4)$ Quantum Hall Ferromagnetism	356
20.2.4 Fermion Dynamical Symmetries for Graphene	357
20.2.5 Graphene $SO(8)$ Dynamical Symmetries	361
20.2.6 Generalized Coherent States for Graphene	364
20.2.7 Physical Interpretation of the Energy Surfaces	366
20.2.8 Quantum Phase Transitions in Graphene	368
20.3 Universality of Emergent States	368
20.3.1 Topological and Algebraic Constraints	369
20.3.2 Analogy with General Relativity	373
20.3.3 Analogy with Renormalization Group Flow	374
Problems	375
21 Generalized Coherent States	377
21.1 Glauber Coherent States	377
21.2 Symmetry and Coherent Electromagnetic States	378
21.2.1 Quantum Optics Hamiltonian	378
21.2.2 Symmetry of the Hamiltonian	379

21.2.3 Hilbert Space	379
21.2.4 Stability Subgroup	379
21.2.5 Coset Space	380
21.2.6 The Coherent State	380
21.3 Construction of Generalized Coherent States	380
21.4 Atoms Interacting with Classical Radiation	382
21.5 Fermion Coherent States	384
Problems	386
22 Restoring Symmetry by Projection	387
22.1 Rotational Symmetry in Atomic Nuclei	387
22.2 The Method of Generator Coordinates	388
22.2.1 Generator Coordinates and Generating Functions	388
22.2.2 The Hill–Wheeler Equation	389
22.3 Angular Momentum Projection	391
22.3.1 The Rotation Operator and its Representations	391
22.3.2 The Angular Momentum Projection Operator	393
22.3.3 Solving the Eigenvalue Equation	394
22.4 Particle Number Projection	395
22.4.1 Violation of Particle Number in BCS Theory	396
22.4.2 Bogoliubov Quasiparticles	397
22.4.3 The Particle Number Projection Operator	400
22.5 Parity Projection	402
22.5.1 The Parity Transformation	402
22.5.2 Breaking Parity Spontaneously	403
22.5.3 The Parity Projection Operator	404
22.6 Spin and Momentum Projection for Electrons	405
22.6.1 Hartree-Fock Approximation for the Hubbard Model	405
22.6.2 Spin and Momentum Projection in the Hubbard Model	406
Problems	408
23 Quantum Phase Transitions	409
23.1 Classical and Quantum Phases	409
23.1.1 Thermal and Quantum Fluctuations	409
23.1.2 Quantum Critical Behavior	410
23.2 Classification of Phase Transitions	410
23.3 Classical Second-Order Phase Transitions	411
23.3.1 Critical Exponents	411
23.3.2 Universality	412
23.4 Continuous Quantum Phase Transitions	413
23.4.1 Order Only at Zero Temperature	414
23.4.2 Order Also at Finite Temperature	415
23.5 Quantum to Classical Crossover	415
23.5.1 The Classical–Quantum Mapping	416

23.5.2	Optimal Dimensionality	416
23.5.3	Quantum versus Classical Phase Transitions	417
23.6	Example: Ising Spins in a Transverse Field	417
23.6.1	Hamiltonian	417
23.6.2	Ground States and Quasiparticle States for $g \rightarrow 0$	418
23.6.3	Ground States and Quasiparticle States for $g \rightarrow \infty$	419
23.6.4	Competing Ground States	419
23.6.5	The Quantum Critical Region	420
23.6.6	Phase Diagram	420
23.7	Dynamical Symmetry and Quantum Phases	421
23.7.1	Quantum Phases in Superconductors	421
23.7.2	Unique Perspective of Dynamical Symmetries	423
23.7.3	Quantum Phases and Insights from Symmetry	423
	Problems	426
Part III Topology and Geometry		427
24	Topology, Manifolds, and Metrics	429
24.1	Basic Concepts of Topology	429
24.1.1	Discrete Categories Distinguished Qualitatively	429
24.1.2	The Nature of Topological Proofs	431
24.1.3	Neighborhoods	431
24.2	Topology and Topological Spaces	433
24.2.1	Formal Definition of a Topology	433
24.2.2	Continuity	434
24.2.3	Compactness	434
24.2.4	Connectedness	436
24.2.5	Homeomorphism	436
24.3	Topological Invariants	437
24.3.1	Compactness is a Topological Invariant	437
24.3.2	Connectedness is a Topological Invariant	437
24.3.3	Dimensionality is a Topological Invariant	437
24.4	Homotopies	439
24.4.1	Homotopic Equivalence Classes	439
24.4.2	Homotopy Classes are Topological Invariants	440
24.4.3	The First Homotopy Group	440
24.4.4	Higher Homotopy Groups	444
24.5	Manifolds and Metric Spaces	445
24.5.1	Differentiable Manifolds	445
24.5.2	Metric Spaces	447
	Problems	449
25	Topological Solitons	450

25.1	Models in (1+1) Dimensions	450
25.1.1	Equations of Motion	450
25.1.2	Vacuum States and Boundary Conditions	451
25.1.3	Topological Charges	452
25.1.4	Soliton Solutions in (1+1) Dimensions	453
25.2	Solitons in (2+1) and (3+1) Dimensions	454
25.2.1	Homotopy Groups	454
25.2.2	Mapping Spheres to Spheres	455
25.3	Yang–Mills Fields and Instantons	456
25.3.1	Solitons in the Euclidean Yang–Mills Field	456
25.3.2	Boundary Conditions	457
25.3.3	Topological Classification of Solutions	458
25.3.4	Physical Interpretation of Instantons	458
	Problems	461
26	Geometry and Gauge Theories	462
26.1	Parallel Transport	462
26.1.1	Flat and Curved Manifolds	462
26.1.2	Connections and Covariant Derivatives	464
26.1.3	Curvature and Parallel Transport	466
26.2	Absolute Derivatives	467
26.3	Parallel Transport in Charge Space	467
26.4	Fiber Bundles and Gauge Manifolds	468
26.4.1	Tangent Spaces and Tangent Bundles	468
26.4.2	Fiber Bundles	469
26.5	Gauge Symmetry on a Spacetime Lattice	470
26.5.1	Path-Dependent Gauge Representations	470
26.5.2	Lattice Gauge Symmetries	471
	Problems	474
27	Geometrical Phases	476
27.1	The Aharonov–Bohm Effect	476
27.1.1	Experimental Setup	476
27.1.2	Analysis of Magnetic Fields	477
27.1.3	Phase of the Electron Wavefunction	477
27.1.4	Topological Origin of the Aharonov–Bohm Effect	478
27.2	The Berry Phase	480
27.2.1	Fast and Slow Degrees of Freedom	480
27.2.2	The Berry Connection	482
27.2.3	Trading the Connection for a Phase	483
27.2.4	Berry Phases	484
27.2.5	Berry Curvature	484
27.3	An Electron in a Magnetic Field	486
27.4	Topological Implications of Berry Phases	487

Problems	490
28 Topology of the Quantum Hall Effect	491
28.1 The Classical Hall Effect	491
28.1.1 Hall Effect Measurements	491
28.1.2 Quantization of the Hall Effect	492
28.2 Landau Levels for Non-Relativistic Electrons	493
28.2.1 Hamiltonian and Schrödinger Equation	494
28.2.2 Landau Levels and Density of States	495
28.3 The Integer Quantum Hall Effect	495
28.3.1 Understanding the Integer Quantum Hall Effect	496
28.3.2 Disorder and the Integer Quantum Hall State	498
28.3.3 Edge States and Conduction	500
28.4 Topology and Integer Quantum Hall Effects	502
28.4.1 Berry Phases and Adiabatic Curvature	503
28.4.2 Chern Numbers	504
28.5 The Fractional Quantum Hall Effect	512
28.5.1 Properties of the Fractional Quantum Hall State	512
28.5.2 Fractionally Charged Quasiparticles	513
28.5.3 Nature of the Edge States	514
28.5.4 Topology and Fractional Quantum Hall States	515
Problems	516
29 Topological Matter	517
29.1 Topology and the Many-Body Paradigm	517
29.1.1 Adiabatic Continuity	517
29.1.2 Spontaneous Symmetry Breaking	518
29.1.3 Beyond the Landau Picture	519
29.2 Berry Phases and Brillouin Zones	520
29.3 Topological States and Symmetry	521
29.4 Topological Insulators	522
29.4.1 The Quantum Spin Hall Effect	523
29.4.2 The Z_2 Topological Index	526
29.5 Weyl Semimetals	532
29.5.1 A Topological Conservation Law	532
29.5.2 Realization of a Weyl Semimetal	533
29.6 Majorana Modes	536
29.6.1 The Dirac Equation in Condensed Matter	536
29.6.2 Quasiparticles and Anti-Quasiparticles	537
29.7 Topological Superconductors	537
29.7.1 Topological Majorana Fermions	537
29.7.2 Fractionalization of Electrons	538
29.8 Fractional Statistics	538
29.8.1 Anyon Statistics	538

29.8.2	The Braid Group	539
29.8.3	Abelian and Non-Abelian Anyons	541
29.9	Quantum Computers and Topological Matter	542
29.9.1	Qubits and Quantum Information	542
29.9.2	The Problem of Decoherence	544
29.9.3	Topological Quantum Computation	544
	Problems	546
 Part IV A Variety of Physical Applications		 547
30	Angular Momentum Recoupling	549
30.1	Recoupling of Three Angular Momenta	549
30.1.1	$6J$ Coefficients	550
30.1.2	Racah Coefficients	550
30.2	Matrix Elements of Tensor Products	551
30.3	Recoupling of Four Angular Momenta	552
30.3.1	$9J$ Coefficients	553
30.3.2	Transformation Between L–S and J–J Coupling	553
30.3.3	Matrix Element of an Independent Tensor Product	554
30.3.4	Matrix Element of a Scalar Product	554
	Problems	556
31	Nuclear Fermion Dynamical Symmetry	558
31.1	The Ginocchio Model	558
31.2	The Fermion Dynamical Symmetry Model	561
31.2.1	Dynamical Symmetry Generators	561
31.2.2	The FDSM Dynamical Symmetries	563
31.2.3	FDSM Irreducible Representations	564
31.2.4	Quantitative FDSM Calculations	566
31.3	The Interacting Boson Model	569
	Problems	571
32	Superconductivity and Superfluidity	573
32.1	Conventional Superconductors	573
32.2	Unconventional Superconductors	573
32.3	The $SU(4)$ Model of Non-Abelian Superconductors	577
32.3.1	The $SU(4)$ Algebra	577
32.3.2	The $SU(4)$ Collective Subspace	581
32.3.3	The Dynamical-Symmetry Hamiltonian	581
32.3.4	The $SU(4)$ Dynamical Symmetry Limits	583
32.3.5	The $SO(4)$ Dynamical-Symmetry Limit	584
32.3.6	The $SU(2)$ Dynamical-Symmetry Limit	584
32.3.7	The $SO(5)$ Dynamical-Symmetry Limit	585

32.3.8	Conventional and Unconventional Superconductors	585
32.4	Some Implications of SU(4) Symmetry	586
32.4.1	No Double Occupancy	586
32.4.2	Quantitative Gap and Phase Diagrams	587
32.4.3	Coherent State Energy Surfaces	588
32.4.4	Fundamental SU(4) Instabilities	589
32.4.5	Origin of High Critical Temperatures	591
32.4.6	Universality of Dynamical Symmetry States	592
	Problems	594
33	Current Algebra	595
33.1	The CVC and PCAC Hypotheses	595
33.1.1	Current Algebra and Chiral Symmetry	595
33.1.2	The Partially Conserved Axial Current	596
33.2	The Linear σ -Model	597
33.2.1	The Particle Spectrum	597
33.2.2	Explicit Breaking of Chiral Symmetry	599
	Problems	600
34	Grand Unified Theories	601
34.1	Evolution of Fundamental Coupling Constants	601
34.2	Minimal Criteria for a Grand Unified Group	602
34.3	The SU(5) Grand Unified Theory	603
34.4	Beyond Simple GUTs	605
	Problems	608
Appendix A	Second Quantization	609
A.1	Symmetrized Many-Particle Wavefunctions	609
A.1.1	Bosonic and Fermionic Wavefunctions	610
A.1.2	Slater Determinants	610
A.2	Dirac Notation	611
A.2.1	Bras, Kets, and Bra-Ket Pairs	611
A.2.2	Bras and Kets as Row and Column Vectors	612
A.2.3	Linear Operators Acting on Bras and Kets	613
A.3	Occupation-Number Representation	613
A.3.1	Creation and Annihilation Operators	615
A.3.2	Basis Transformations	616
A.3.3	Many-Particle Vector States	617
A.3.4	One-Body and Two-Body Operators	617
Appendix B	Natural Units	620
Appendix C	Angular Momentum Tables	622

Appendix D	Lie Algebras	625
